Additional information

This catalogue shows the product in the most standard configurations.
Please contact Sales Dpt. for more detailed information or special request.

WARNING!

All specifications of this catalogue refer to the standard product at this date.
Walvoil, oriented to a continuous improvement, reserves the right to
discontinue, modify or revise the specifications, without notice.

WALVOIL IS NOT RESPONSIBLE FOR ANY DAMAGE CAUSED BY AN
INCORRECT USE OF THE PRODUCT.

8th edition December 2019

The DPC Series

The DPC Series is a family of open/closed center pre-pressure compensated sectional valves designed specifically for Mobile Applications. The DPC series provides exceptional controllability, efficiency and flexibility for applications requiring up to 240 l/min (63.4 US gpm) flow rate. DPC Series is available in two different sizes: DPC130 (DPC130X) and DPC200.

**The Load Sensing technology**

Thanks to the use of specially designed pumps and control valves, the Load Sensing principle can be considered the most comprehensive means of creating a flexible hydraulic circuit that can adapt to the various operating conditions demanded by users. The main feature of this principle is that the flow rate to the user is proportional to the spool position under any operating condition, regardless of the resistance encountered by the user (pressure) and the number of levers activated (exceeding the pump's total flow rate, a condition here in after defined as saturation, is the only limitation).

Therefore, with the LS systems, there is a specific correspondence between the position of the control lever and the movement speed of the user, cylinder or hydraulic motor. This feature is particularly useful in the hydraulic handling machine sector (excavators, cranes, loaders, agricultural and forestry machinery) in which each movement phase has specific sequences that the operator must control by using memorised movements.

Advantages and options

- Energy saving.
- Extension of part service life.
- Lower energy dissipation.
- Noise reduction.
- Available to create a single-pump circuit (compared with the use of multiple-pump circuits in which each pump is dedicated to different actuators to be operated simultaneously).

Real energy savings can be obtained above all when the DPC directional valves operate together with variable displacement Load Sensing pumps. When the DPC valve is utilised with fixed displacement pumps, the previously mentioned movement independence and repeatability features are guaranteed, but energy savings will be limited.

For special options please contact Sales Dept.

The ATEX version

The DPC130X is the DPC Series new valve built according to the ATEX directive for safe use in classified areas, with inflammable and potentially explosive materials.

Hydraulic features and performance remain the same of the DPC130 standard valve.

For more informations see code D1WWED03E catalogue.

Working conditions

This catalogue shows technical specifications and diagrams measured with mineral oil of $46 \text{ mm}^2/\text{s}$ - 46 cSt viscosity at 40°C - 104°F temperature.

		DPC130	DPC200
Nominal flow rating (open center circuit)	on inlet port with compensator @ stand-by (margin pressure) on working ports with compensator ($Q_{in}/Q_{ut} > 10\%$) @ stand-by (margin pressure) on working ports without compensator ($Q_{in}/Q_{ut} > 10\%$) @ stand-by (margin pressure)	150 l/min - 39.6 US gpm @ 9 bar - 131 ps 100 l/min - 26.4 US gpm @ 7 bar - 102 ps 130 l/min - 34.3 US gpm @ 9 bar - 131 ps	260 l/min - 68.7 US gpm @ 11.5 bar - 167 ps 200 l/min - 52.8 US gpm @ 7 bar - 102 ps 240 l/min - 63.4 US gpm @ 11.5 bar - 167 ps

4FL1066180	DN19 blind flange

Working section

Dimensions and hydraulic circuit

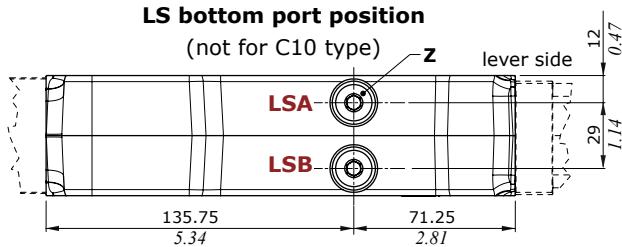

Without port valves

The diagram illustrates a top-down view of a dual-lens camera module. It features two circular lenses labeled A and B. The overall width of the module is 68 mm, divided into segments of 64.75 mm, 2.68 mm, 74.25 mm, and 2.923 mm. On the left side, there are four mounting holes arranged in a cross pattern. On the right side, there are two vertical dimensions: a height of 1.04 mm from the bottom to the top edge, and a total height of 53 mm from the bottom to the top of the lens area.

LS bottom port position

(not for C10 type)

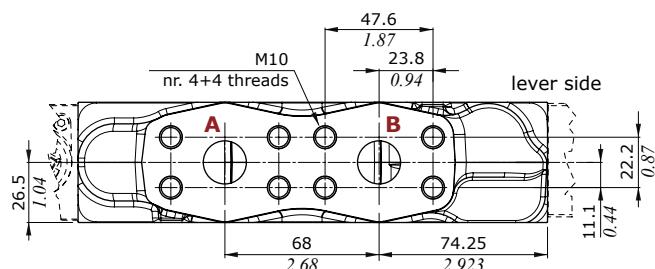

Wrenches and tightening torques

X = allen wrench 12 - 90 Nm (66 lbf)

Y = allen wrench 17 - 90 Nm (66 lbf)

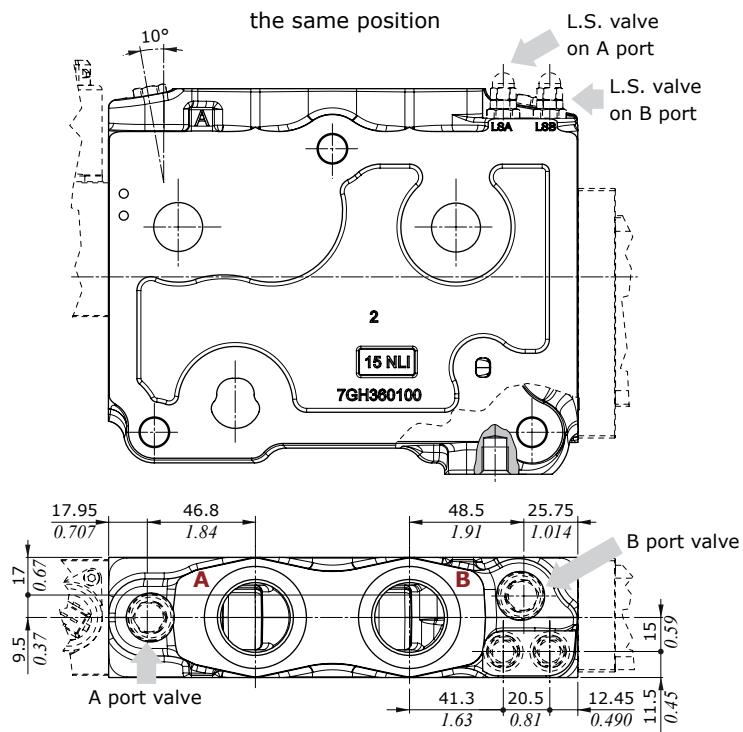

FS3-M(BSP) optional connection

With port valves

"U" and "UL" size valves have

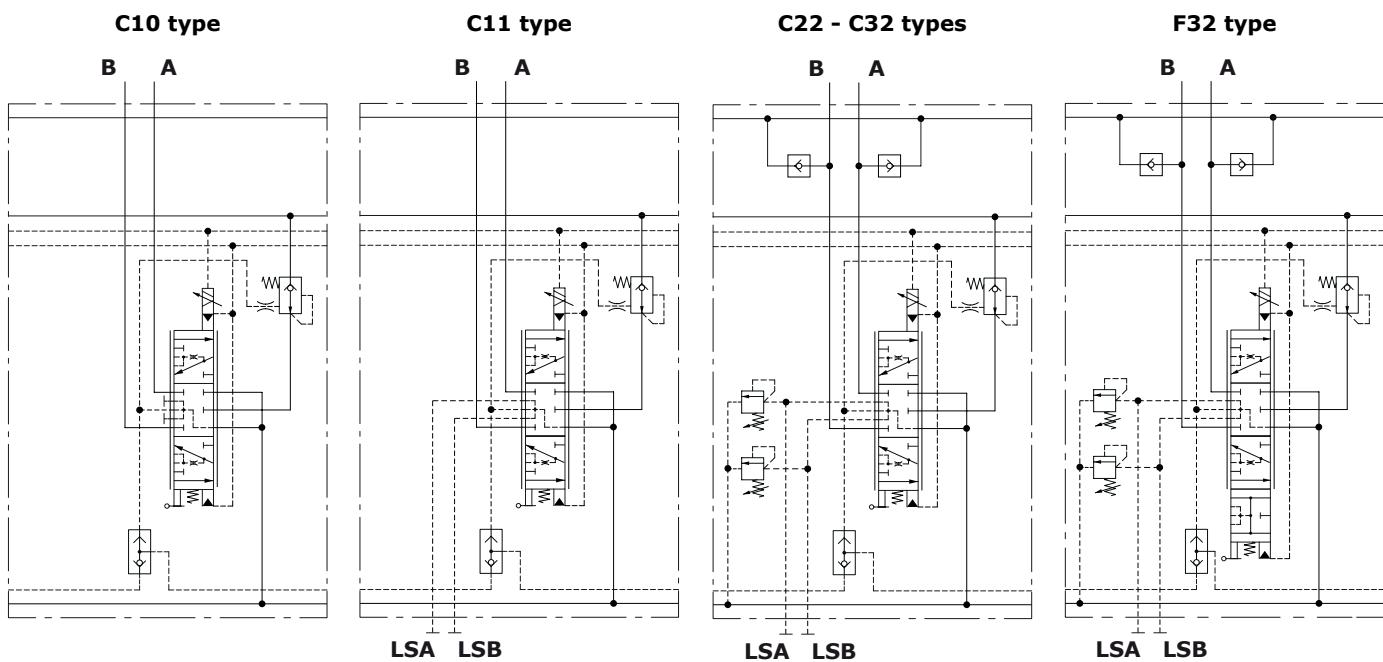

the same position

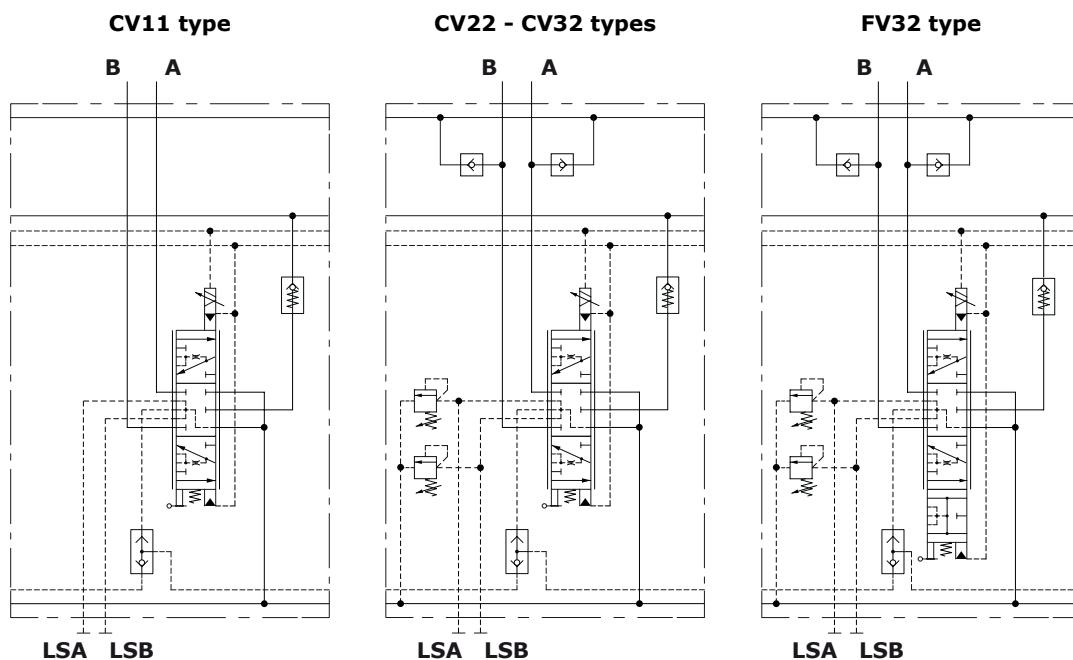

Working section

position 1: - 8 mm (- 0.31 in)
 position 2: + 8 mm (+ 0.31 in)
 position 3: - 13 mm (- 0.51 in)

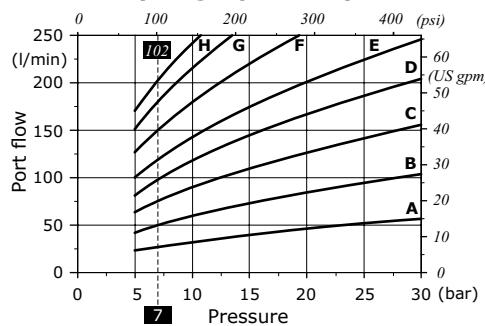

Working section**Spools**

Following curves are detected with standard spools, connecting P⇒A⇒B⇒T and P⇒B⇒A⇒T ports without flow multiplication. Customized spools with backpressure or flow multiplication may require different force, pressure and pilot current for operation.

NOTE: for spools up to 120 l/min (31.7 US gpm), the effective flow on working ports may differ by 10% between the 1st an 10th section.

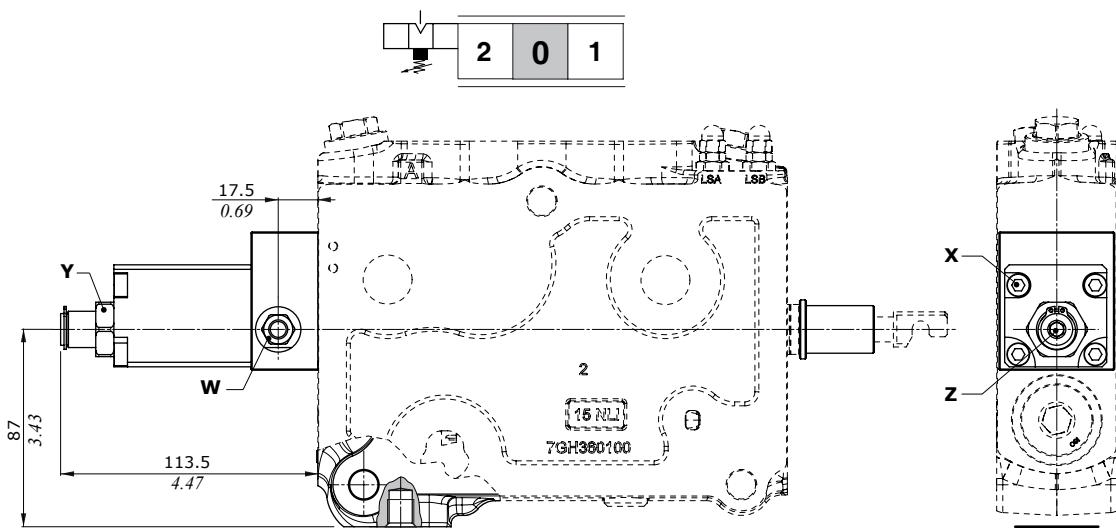

Non-compensated working section
Spool flow vs. Stand-by pressure
(margin pressure)

**Spool nominal flow @ 7 bar (102 psi)
stand-by (margin pressure)**

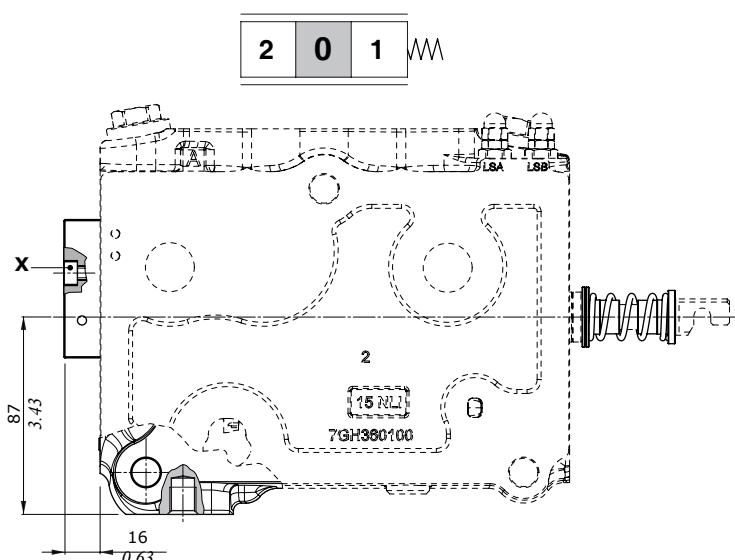

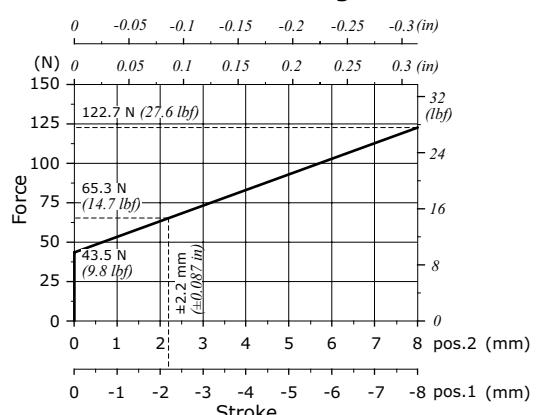

- A** = 25 l/min (6.6 US gpm)

Note (1) for the calculation rules please see "Appendix A" on page 80.

Listed electrohydraulic controls require CED400W electronic unit; for information please contact Sales Department.

Working section**Electrohydraulic controls: spool position sensor**

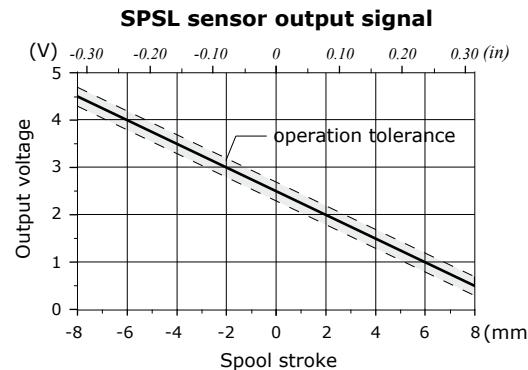

The sensor can be ordered exclusively through the electrohydraulic controls; please see page 63 for available control list.

SPSL sensor

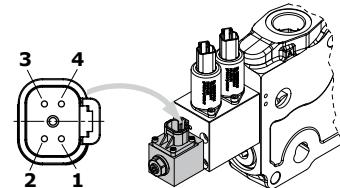

The SPSL position sensor converts the spool movements into a voltage linear signal.

Working conditions

Voltage supply	5 VDC
Current absorption	< 10 mA (no load)
Mechanical life	3x10 ⁶
Connector type	DT04-4P Deutsch
Weather protection	IP67 / IP69K
Working temperature	from -40°C to 105°C (from -40°F to 221°F)
Working pressure	350 bar (5100 psi)
Max. electrical stroke	±10 mm (±0.39 in)
Max. mechanical stroke	±10 mm (±0.39 in)
Output signal	range from 0.5 to 4.5 V
	linearity ± 5%
	spool in neutral 2.5 ± 0.2 V
	max. current 1 mA
EMC compatibility	ISO 13766 / ISO 14982
Mechanical vibrations, shock, bumps	IEC 68-2-6,-27,-29

Main rules

The DPC Series valves are assembled and tested as per the technical specifications of this catalogue.

Before the final installation on your equipment, please follow the below recommendations:

- the valve can be assembled in any position; in order to prevent body deformation and spool sticking mount the product on a flat surface;
- In order to prevent the possibility of water entering the spool control kit, do not use high pressure washdown directly on the valve;
- prior to painting, ensure plugs on normally open ports are tightly in place.

	bolts torque; min-max	28-40 / 20.7-29.5	28-40 / 20.7-29.5	37-48 / 27.3-35.4	-	-
	(*) V2 port is M14x1.5 threading: tightening torque value is the same of G1/4 thread					

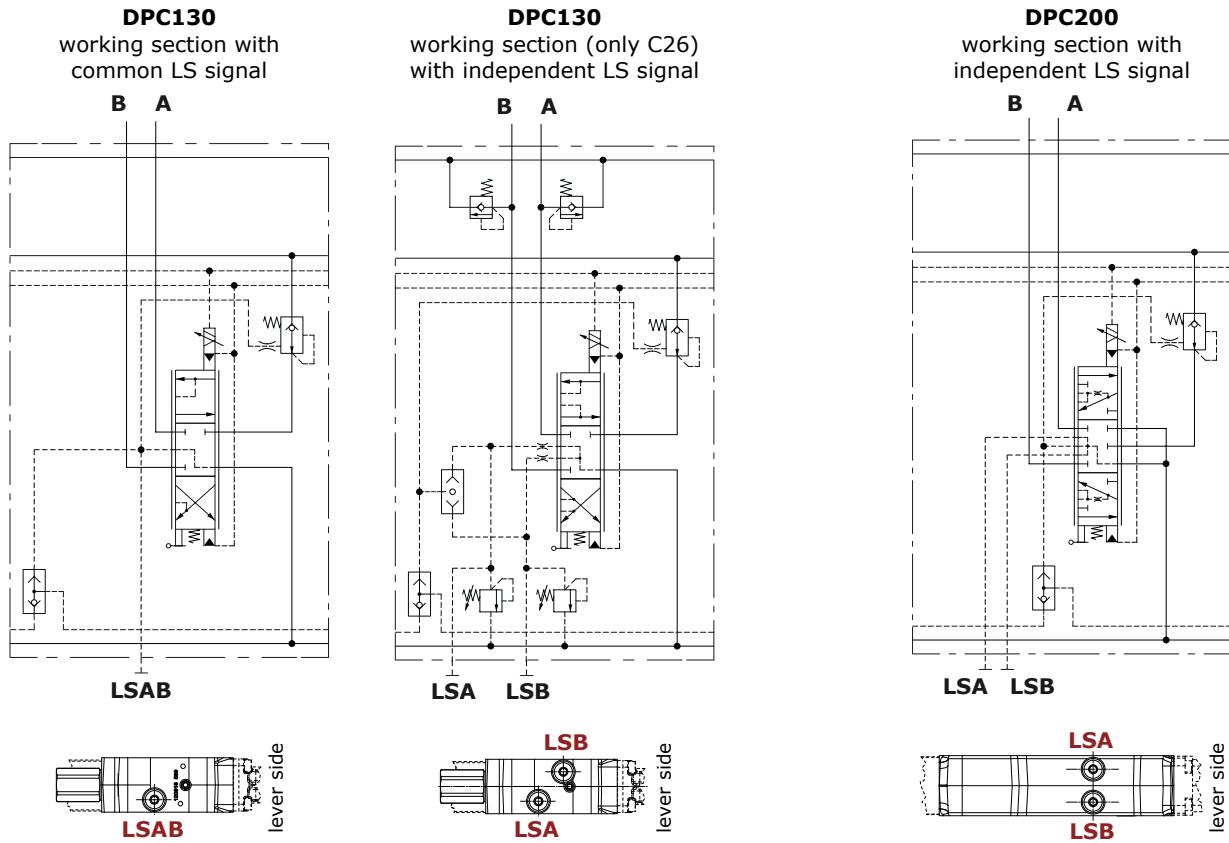

(*) V2 port is M14x1.5 threading: tightening torque value is the same of G1/4 thread

NOTE – These torque are recommended. Assembly tightening torque depends on many factors, including lubrication, coating and surface finish.

Main rules

Series DPC working sections are arranged for external operation of LS signal through dedicated ports on the lower side of sections.

For the maximum permissible pipe length please contact Sales Dpt.

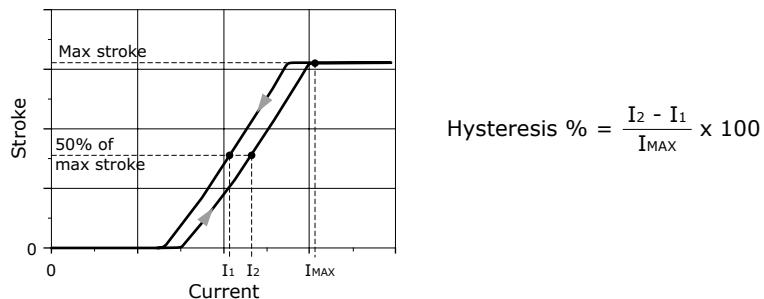

Appendix A

Electrohydraulic controls: hysteresis calculation rule

Hysteresis is calculated as difference between control currents ($I_2 - I_1$), necessary to reach 50% of nominal spool stroke, referred to maximum control current I_{MAX} , necessary to reach 100% of spool stroke.

I_2 is determined on spool stroke increase line, I_1 is determined on spool stroke decrease line.

Example diagram for data detection

$$\text{Hysteresis \%} = \frac{I_2 - I_1}{I_{MAX}} \times 100$$
